VIRODUCTION

One of the defining parameters for delivering India's sustainable development agenda will be the development path chosen by urban India.

-Economic Survey of India, 2017-18

(Department of Economic Affairs 2018)

ties are increasingly seen as targets for strategic measures in relation to climate change. The United Nations' N) 2015 Sustainable Development Goals (SDGs) include an explicit goal on cities, and the 2015 Paris imate Agreement enables new nationally designated instruments to promote climate outcomes and phasizes the importance of cities. UN-Habitat's 2016 New Urban Agenda emphasizes the role of local city venments in addressing climate change. The eleventh SDG focuses specifically on cities. As targets for frastructure provision and immediate social and environmental challenges, cities have become central ations for the economic, environmental and social pillars of sustainability (Acuto, Parnell, & Seto, 2018; Ochez Rodriguez, Urge-Vorsatz, & Barau, 2018). The importance of urban climate response is particularly portant for developing countries, where most urban growth is expected to occur and which are often exposed climate impacts. Of climate impacts (Nagendra, Bai, Brondizio, & Lwasa, 2018). In fact, the infrastructure improvements and In fact, the infrastructure imports (Nagendra, Bai, Brondizio, & Lwasa, 2018). THE ROLE OF TECHNOLOGY IN SUSTAINABLE DEVELOPMENT AND GLOBAL GOVERNANCE

Dr. Amit Kashyap Mrs. Shashi Bala Kashyap

Abstract

A new wave of technology is driving rapid international A new wave of technical and the areas of sustain for multilateral cooperation in the areas of sustainable state-society relations, peace and considerable multilateral cooperant sustainable development, state-society relations, peace and conflict, international security and global governance. Waves of technological change driven by inventions ranging from steam power to electricity to automobiles have driven economic development and social change throughout history. Some historians talk of "technological revolutions", from the First Industrial Revolution that mechanized production, to the Second Industrial Revolution that brought mass production, to the Third Industrial Revolution, to automated production. The Fourth Industrial Revolution has argued that "the convergence of technologies ... is blurring the lines between the physical, digital, and biological realms." In this latest technological revolution, everything from the internet to drones to big data has been dubbed 'emerging technologies', and the potential applications of these technologies are expanding rapidly.
